Tharisa Mine achieves record PGM production in January 2015

The Tharisa Mine produced a record 10 593 5E + Au contained PGM ounces during January 2015.

Since the commencement of Tharisa's initial mining operations in 2008, it has now mined and processed a total of over 10 million tonnes of reef with a further 22 years of open pit life remaining.

This is an important milestone for Tharisa. Month on month production has shown a strong positive upward trend over the last year, particularly following changes implemented during the latter half of 2014. January's record production is another step towards reaching annualised steady state levels by Q1 FY2016.

The above information has not been reported on or reviewed by Tharisa's auditors.
